

OMNISHORE

Vehicle shoring

Trench shoring

High directionals

Structural shoring

Every rescue shoring operation calls for unique skills. Time for equally unique equipment.

First responders must be able to adapt to every possible situation.

Have the ability to change tactics every step of the way. And be smart enough to always think ten steps ahead.

Holmatro understands the challenges of rescue shoring. That's why we've created a shoring system that is as adaptive, versatile and intuitive as you.

This is OmniShore. A shoring system reimagined from the ground up, designed in accordance with the highest standards of quality and safety.

OmniShore features cutting-edge, patented innovations, giving you an edge in quickly and safely responding to every shoring scenario imaginable.

FEMA
US&R STRUCTURES SUB-GROUP

Holmatro developed OmniShore according to the criteria of testing used by FEMA's US&R Structures Sub Group to evaluate similar type shoring.

Overcome unlimited shoring challenges with a minimum number of components.

One single system for all shoring operations

OmniShore is the world's first and only shoring solution that allows you to build any application with a system of only six different struts.

Save weight and space on your truck

Compact yet complete, the OmniShore system takes up less space on your truck and in storage. It has been designed to do more with less.

Construct any length from 1 to 17 feet with five different struts

With the OmniShore M10, P20, P30, P40 and P60 struts you have access to the longest extension range on the market.

Fixed length extension pipes are not needed

We've eliminated the need for impractical extension pipes. Each strut also functions as one, saving you time as well as space.

Easily construct lengths up to 17 feet without any need for extension pipes.

PATENTED

Experience a quick and easy setup in one intuitive workflow.

Connect every single strut to every other single strut

Our patented Trident Coupler always fits with ease. You can only connect two struts together, so any connection you can make is 100% safe.

Connect accessories quickly and easily

We've made sure that every single accessory fits the Trident Coupler and the plunger end of each strut.

Struts and accessories
always fit together
thanks to the patented
Trident Coupler.

Two connected struts = twice the plunger stroke.

Exact measurement is not needed

Two connected struts offer twice the plunger stroke, eliminating the need for precise measurement and allowing fast setup during demanding, time sensitive situations.

**Take full control
with less manpower
thanks to OmniLock.**

PATENTED

No one needs to be near a moving load

With our patented OmniLock system you can monitor and operate struts from a safe distance. You will spend less time in the danger zone to focus on what matters: making sure safety is secured.

Automatically follow and lock a load

Auto-follow has your back. Every OmniLock strut automatically follows a load in upward and downward motion, remaining mechanically locked at all times.

OmniLock and all Pentheon rescue tools share the same interchangeable battery.

Less people needed to control a situation.

OmniLock seamlessly works with our state-of-the-art Wireless Controller. This remotely operated device lets you control multiple OmniLock struts simultaneously and align them effortlessly.
